

TECHNICAL SPECIFICATIONS

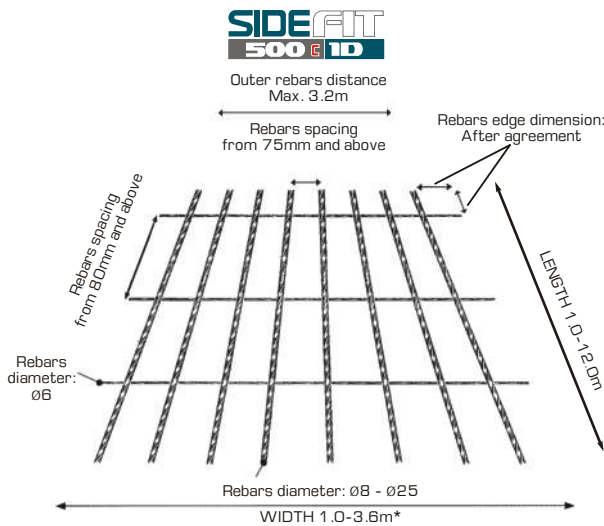

SIDEFIT Special Concrete Reinforcing Mesh stands out for the wide range of applications and its flexibility regarding the technical characteristics such as: diameter and spacing of reinforcement, mesh dimensions etc. (see Table).

Its production from straight SD bars, BSt500S -DIN 488 ensures accuracy in geometry and enables easy forming.

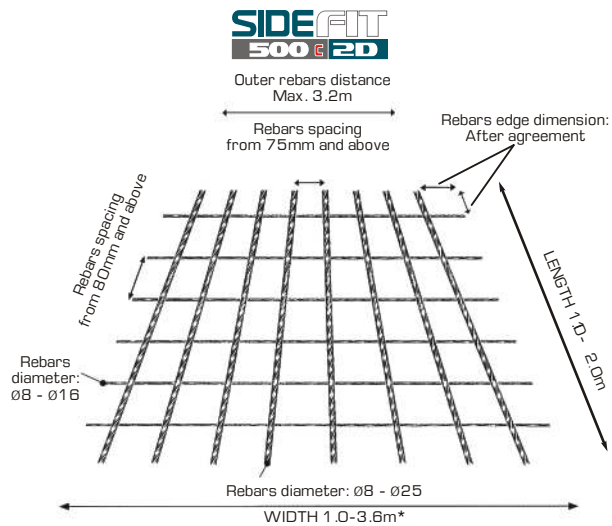

SIDEFIT SPECIAL MESH

SIDEFIT Special Mesh is tailor-made reinforcement in 1D and 2D sheets of mesh, produced from welded straight rebars SD, grade BSt500S - DIN 488. As a tailor-made family of products, SIDEFIT is characterized by high flexibility in the production of different dimensions and geometric characteristics as well as specific needs in free edges for minimization of unused overlap.

SIDEFIT Special Mesh has a wide use in reinforcing different reinforced concrete members such as walls, slabs, footings as well as beams and columns after bending.

* Due to transportation safety restrictions, it is proposed that either length or width must be less than 2.40m or 2.60m

* Due to transportation safety restrictions, it is proposed that either length or width must be less than 2.40m or 2.60m
